To: Whom it May Concern

Fort Stockton EDC has had the pleasure of working with AOT Recreation for multiple projects over the past two years that have totaled over $500,000 in equipment and installations. These projects range from replacements of complete playground structures, installation of new shade structures, and installation of swings and other amenities.

The personalized service and expertise of the AOT Recreation team has guided our decision making and ability to maximize the impact of our funds. Working with AOT Recreation, we have revitalized two parks and are in the process of designing and planning installation of a third park revitalization that is to start this fall and will be completed over the winter months.

While purchasing a quality product is of high priority for our Board, what makes AOT Recreation stand out above the rest is the service associated with the installation process and their ability to adapt to obstacles that may arise during the installation. Through their network of installation professionals these projects were completed in a safe and timely manner while protecting our citizens with all required precautions in place.

If you have any questions, please do not hesitate to reach out to me directly.

Sincerely,

Remie Ramos
